

## Prices

	Single	Bundle of 3
Face	£300	£700*
Neck	£300	£700*
Décolleté	£300	£700*
Face and Neck	£400	£900*
Neck and Décolleté	£400	£900*
Face, Neck, and Décolleté	£500	£1100*
Abdomen	£300	£700
Upper arms	£400	£900
Double chin	£150	£400

*\*The price of these bundles includes an aftercare package from the French-manufactured 'Eneomey' range, containing 'Soft Cleanse', 'Rejuv Silk' and 'Sunlight 50' SPF, designed to complement and enhance RF Microneedling treatments, normally retailing at £180. The 'abdomen' bundle includes the Eneomey 'Perfect Body 30'.*

## Radio Frequency Micro Needling

Research has shown that when skin cells are exposed to high temperatures (46°C) it stimulates the release of 'heat shock proteins' which are key molecules in wound healing\*. Fibroblasts in the dermal layer are stimulated to secrete more collagen and elastin, which give the skin renewed strength and elasticity. Micro needling creates thousands of minute channels in the dermal layer which also traumatises the skin. The resulting inflammatory response leads to skin remodelling, also facilitated by fibroblasts, which had until then, become increasingly less active with age.

Melius Advanced adds the element of radiofrequency energy to the traditional micro needling procedure. The radio frequency is delivered via small needles. In addition to the benefits seen with the micro trauma provided by the micro needles, RF micro needling also delivers RF energy deep into the dermis further enhancing skin tightening and scar reduction. The RF energy heats the underlying layers causing constriction of the skin, as well as skin remodelling and the production of collagen and elastin. By combining the modalities of RF and micro needling, this innovative aesthetic procedure 'kick starts' collagen and elastin synthesis to rejuvenate the skin, reorganises collagen in scar tissue and stretch marks, and destroys fat cells.

*\*Lack of heat shock' proteins in diabetics has been linked to poor wound healing.*

This client presented with loose, redundant skin around her abdomen. An exercise regime has had little effect. The image on the right shows the immediate results following the first treatment with RF Micro needling. The modality was calibrated to target and tighten deeper layers of the skin, the client did not need any anaesthetic.

Larger cartridges are used for areas such as the abdomen and upper arms and vice versa. The microneedles are calibrated to target the correct depth of the skin, whilst the radiofrequency emitted by the tips of the needles is set at an intensity to achieve the required stimulatory effect on fibroblast activity.

## What to expect

**During the procedure:** Firstly, your practitioner will remove any makeup and sanitise your skin. Depending upon your skin's sensitivity, the area being treated, needle depth and RF intensity settings, your practitioner may decide to use a topical anaesthetic, in which case this will be applied and left for 20 minutes. The procedure itself is relatively pain-free.

**Immediately after the procedure:** The treated area will be red with visible grids of pinpoint bleeding which lasts a few hours. This is normal. Your practitioner will apply a hydrating mask to your face or treated area and leave this in place while the active products enter the skin.

**The days after the procedure:** There is very little downtime with RF Micro-needling, though your skin might be tender and feel like it's slightly sunburnt.

## Pre-treatment advice

To reduce any risk of bruising and bleeding, it is important to avoid alcohol, aspirin, and anti-inflammatories such as ibuprofen, as they all increase the blood clotting time. If you develop a skin infection in the treatment area before your appointment, you cannot be treated.

## The Benefits of Radio Frequency Micro Needling

The most common treatment areas that can benefit from this non-invasive procedure include the face, neck, and décolleté, but the RF Micro needling handpiece can also be used on the abdomen, knees, thighs, and almost any other body area.

Collagen induction therapy is boosted by the combination of radiofrequency energy and micro needling in one treatment.

This anti-aging treatment is suitable for all skin types and tones, with little risk of side effects when it's performed properly. It comes with minimal downtime, so you should be able to resume your normal activities the next day.
